PROPERTIES OF SUV PTFE LABWARE PRODUCTS

Non - Stick	Very few solid substances will permanently adhere to a "SUV" coating. And while tacky materials may show some adhesion, almost all substances release easily.
Non - Wetting	Since "SUV" surfaces are both oleo phobic and hydrophobic, they are not readily wet. Clean-up is easier, more thorough and in many cases self-cleaning.
Heat Resistance	There is no decomposition of "SUV" finishes below 400o F; insignificant decomposition between 400 and 500 F which requires no special precautions. From 500 to 575 F, intermittent service is possible with adequate ventilation.
Low Coefficient of Friction	The coefficient of friction of "SUV" is generally in the range of 0.05 to 0.20, depending upon the load, sliding speed and particular "SUV" finish used.
Cryogenic Stability	Many "SUV" will withstand severe temperatures extremes without loss of physical properties. "SUV" may be considered for use at temperatures as low as -450o F.
Unique Electrical Properties	Over a wide range of frequencies, "SUV" has high dielectric strength, a low dissipation factor, and very high surface resistivity. By special techniques, it can be made conductive enough to be used as an anti-static coating.
Chemical Resistance	"SUV" is normally unaffected by chemical environments. However, certain coatings are permeable or have a lower resistance to attack. The only chemicals known to affect all "SUV" finishes are the alkali metals and highly reactive fluorinating agents.
